174 listings flagged for invalid data (price/capacity/night-range errors) or persistently low ratings (<70, 10+ reviews).

Executive KPI Cadence

What to track, and how often, to run this marketplace

Market Health &
Growth

Regional Market
Analysis

Listing Quality
Monitoring

Executive KPI
Cadence

DAILY

Superhost Rate & Response Rate:

Directly reflects host-side service quality; cheap to glance at daily.

DAILY

Listing quality flags (price/capacity/night-range errors, persistently low ratings):

Cheapest signal to compute, catches broken listings before they hurt guest experience

WEEKLY

Demand trend & neighbourhood concentration shifts:

Tracks whether a city's seasonal pattern is holding, and whether a new neighbourhood is emerging as a demand hotspot.

WEEKLY

Flagged listings volume:

Rising count week over week = a systemic data-entry or quality problem, not a one-off.

MONTHLY

Marketplace Health Score & YoY Growth by city:

Composite, strategic view — where marketplace health is drifting or which cities are losing growth momentum

MONTHLY

Pricing, Quality & Demand positioning by region:

Slower-moving structural view of how room types are priced/rated relative to each other, city to city
